Discharging specialty / department	Acute Medicine
Discharge location	Ward Z
Date of discharge	16-Apr-2016
Time of discharge	1900hrs
Discharge method	PATIENT discharged on clinical advice or with clinical consent
Discharge destination	Usual place of residence

Diagnoses

Diagnosis / symptom	Infective exacerbation of COPD
Comment	Primary reason for admission
Diagnosis / symptom	Hypertension
Comment	Secondary diagnosis and treated on this admission

Clinical summary

Mr Smith presented with a 3 day history of increasing breathlessness, wheeze, productive cough (yellow sputum) and low grade pyrexia (37.7 degrees Celsius). His CXR showed no focal consolidation, his CRP was 57 and his WBC was normal. He was treated for an infective exacerbation of his COPD with 24 hours of nebulised salbutamol and ipratropium and started on steroids and antibiotics. He quickly improved and was well enough for discharge on day 2.

Investigation results

Investigation result

Chest X-ray (15th April 2016) - hyperinflated lungs consistent with the clinical story of COPD. No focal consolidation or pneumothorax seen. No focal mass seen. Appearances are unchanged compared to previous CXR 3rd November 2015

Medications and medical devices

Medication item	
Medication name	Salbutamol
Route	Inhaled
Dose amount	100 micrograms per puff X 2
Dose timing	PRN
Medication change summary	
Status	Continued
