Discharging specialty / department	Acute Medicine
Discharge location	Ward Z
Date/time of discharge	16-Apr-2016, 1900hrs
Discharge method	PATIENT discharged on clinical advice or with clinical consent
Discharge destination	Usual place of residence

Diagnoses

Diagnosis	Infective exacerbation of COPD
Comment	Primary reason for admission
Diagnosis	Hypertension
Comment	Secondary diagnosis and treated on this admission

Clinical summary

Mr Smith presented with a 3 day history of increasing breathlessness, wheeze, productive cough (yellow sputum) and low grade pyrexia (37.7 degrees Celsius). His CXR showed no focal consolidation, his CRP was 57 and his WBC was normal. He was treated for an infective exacerbation of his COPD with 24 hours of nebulised salbutamol and ipratropium and started on steroids and antibiotics. He quickly improved and was well enough for discharge on day 2.

Investigation results

Investigation result	Chest X-ray (15th April 2016) - hyperinflated lungs consistent with the clinical story of COPD. No focal consolidation or pneumothorax seen. No focal mass seen. Appearances are unchanged compared to previous CXR 3rd November 2015
